Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase an active site mutation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the meth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
tryptases, active site mutants of these tryptases and the methods for producting these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in bosts transformed to contain the construct). The method is useful for producing enzymatically-active
                                                                                                                                                                                                                                                    WPI; 2002-114578/15

The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, etc. AAUI2009-AAUI2024 represent recombinant human beta-II tryptase active site mutants.

beta-tryptase. The DNA construct is useful for transforming host cells to CC express, post translationally process and secrete enzymatically active chuman tryptase. The method is useful for the production of large amounts of tryptase with defined specifications. The transformant is useful for conformant is useful for conformant is useful for conformatically active crystallographic studies, combinatorial library screens and x ray conformant of tryptase agonists and/or antagonists, is useful for checked allows for the compounds which act as tryptase inhibitors, can be used in screening for compounds which act as tryptase inhibitors, can be used in screening for compounds which act as tryptase inhibitors, can to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists etc. and to assay for the presence of tryptase in compounds which compounds to post-expression or post-purification modifications or manipulations to initiate tryptase activity and it has enzymatic activity which compares favourably with cadaveric tryptase. The availability of enzymatically cative tryptase facilitates the large scale screening of combinatorial conformations the understanding of the biological significance of tryptase in levels of tryptase in tryptase can be used to detect low construct of tryptase. The tryptase can be used to detect low
                                                   Percent Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence is the human beta-tryptase. The invention relates to DNA expression construct comprising (5' to 3') a promoter linked signal sequence which is linked to a sequence encoding human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 43-44; 50pp; English.

CC producing these. The method involves the production of a DNA expression CC construct comprising a promoter operably linked to a secretion signal CC sequence which is operably linked to a DNA sequence encoding a CC proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity CC due to the active site mutation, in hosts transformed to contain the CC construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide CC at 1 tryptase. The active site mutants of proteolytic tryptase provide CC at 1 tryptase the structural and functional properties of the CC canstacase and its enzymatic activity, and for modelling studies. The CC enzymatically-active, recombinant proteolytic tryptase produced are CC useful as an antigen to generate anti-human tryptase antibodies CC antagonists, agonists, etc. The present sequence represents recombinant vy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present invention relates to recombinant human proptases, active site mutants of these tryptases and

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active the mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The

                                                                                                                                                                                                                                 Score
                                                                                                                                                                                                                                                                                                                                                            The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies
                                                                                                                                                                                                                                                                                                                      and in drug screening for compounds which act as tryptas antagonists, agonists, etc. AAU12009-AAU12024 represent human beta-II tryptase active site mutants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 8; Page 93; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC tryptases, active site mutants of these tryptases and the methods for CC producing these. The method involves the production of a DNA expression CC construct comprising a promoter operably linked to a secretion signal CC sequence which is operably linked to a DNA sequence encoding a CC proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity CC due to the active site mutation, in hosts transformed to contain the CC construct). The method is useful for producing enzymatically-active CC beta II tryptase. The active site mutants of proteolytic tryptase provide CC a tool to investigate the structural and functional properties of the CC protease and its enzymatic activity, and for modelling studies. The CC enzymatically-active, recombinant proteolytic tryptase produced are CC useful as an antigen to generate anti-human tryptase antibodies CC antagonists, agonists, etc. The present sequence represents human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        an active site mutation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B
                                                                due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies
                                                                                                                                                                tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity
                          and in drug screening for compounds which act antagonists, agonists, etc. AAU12009-AAU12024 human beta-II tryptase active site mutants.
                                                                                                                                                                                                                                                                                                                        DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase

The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies antigonists, agonists, etc. AAUI2009-AAUI2024 represent recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase an active site mutation \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.

The method involves the production of a DNA expression CC construct comprising a promoter operably linked to a secretion signal CC sequence which is operably linked to a DNA sequence encoding a CC proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity CC due to the active site mutation, in hosts transformed to contain the CC construct). The method is useful for producing enzymatically-active CC beta-II tryptase. The active site mutants of proteolytic tryptase provide CC a tool to investigate the structural and functional properties of the CC protease and its enzymatic activity, and for modelling studies. The CC enzymatically-active, recombinant proteolytic tryptase produced are CC useful as an antigen to generate anti-human tryptase antibodies CC and in drug screening for compounds which act as tryptase inhibitors, CC antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant tryptase antibodies CC constructions and constructions are combinant tryptase inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                   beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAUI2009-AAUI2024 represent recombinant
                                                                                                                                                                                                                                                                                    producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active
                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for

The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The compounds which act as tryptase inhibitors, and in drug screening for compounds which act as tryptase inhibitors, and hots. It tryptase active set. AAUI2009-AAUI2024 represent recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

                                     The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activit
due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase p

The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, actc. AAUI2009-AAUI2004 represent recombinant human beta-II tryptase active site mutants.

The method is useful for producing enzymatically-active construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide construct). The method is useful for producing enzymatically-active construct) and functional properties of the construction to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The companies and indices of the construction as an antigen to generate anti-luman tryptase antibodies cand in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. The present sequence represents recombinant tryptase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase an active site mutation - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the deduced amino acid sequence of human mast cell tryptase II/beta (see also AAV44330). The invention provides: compositions comprising an isolated tryptase-7 that may include chimeric proteins that contain (a) a human tryptase for all but the active site region and (b) the substrate-binding pocket of mouse tryptase-7 or its homologues (see AAW64233-39); a method for treating a blood clot by administering a nucleic acid molecule that codes for a tryptase-7, or an expression product, to decrease fibrinogen activity; a nucleic acid encoding a serine protease (5P); and a method of producing a mature SP by expressing the inactive zymogen in a host cell, and cleaving the enterokinase usceptibility domain. The tryptase-7 polypeptides can be used to treat disorders mediated by undesirable thrombus clot formation such as myocardial infarction and reocclusion following angioplasty of blood clots associated with pulmonary thromboembolism, deep vein thrombosis, cerebral embolism, useful for all surgical procedures that require decreased blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful clots.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1998-333308/29

Patent No. US20020086554A1
GENERAL INFORMATION:
APPLICANT: Allen, Keith D.
APPLICANT: Leviten, Michael W.
TITLE OF INVENTION: TRANSCENIC MICE CONTAINING TRYPTASE GENE TITLE OF INVENTION: DISRUPTIONS
FILE REFERENCE: R-372
CURRENT APPLICATION NUMBER: US/09/900,754
CURRENT FILING DATE: 2001-07-06
PRIOR APPLICATION NUMBER: US 60/216,109
PRIOR APPLICATION NUMBER: US 60/223,172
PRIOR APPLICATION NUMBER: US 60/223,172
PRIOR APPLICATION NUMBER: US 60/244,111
PRIOR FILING DATE: 2000-08-07
PRIOR FILING DATE: 2000-10-26
NUMBER: OF SEO ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 2
LENGTH: 311
TYPE: PRT
